

Ramp Dozer Snowplow

The incredible strength and versatility of the **VIKING** Ramp Dozer Plow make it the Industry's most asked for plow for airport and municipal use.

This plow features a variety of moldboard lengths from 14' to 30' reinforced by high strength ribs, and specially designed structural tubing and end plates. The ribs and plates are single cut 1/2" steel adding to the ramp dozer's strength and durability.

The Viking Ramp Dozer is designed to push snow and slush away from transportation areas, ramp areas, gates, structures and parking areas. Its size and easy maneuverability give it the versatility to easily and quickly clean hard to get areas.

The Viking Ramp Dozer Plow may be used with either rubber or steel cutting edges. It is designed to be used on 3 to 5 yard bucket loaders by either using a quick coupler system to the loader boom or by connecting it to the front and end plates of the bucket.
